

My Study of Distillation Things

Abstract

This paper studies things that are important for readers today.
We show results that are useful and easy to reproduce for everyone.

1 Introduction

This is the first paragraph of the introduction section talking about things in general and how this method helps researchers understand more. It has a third line to give enough body-sized samples for the metrics.

2 Method

This is the left column of the method section describing the first half of our approach used in this work today.

This is the right column of the method section describing the second half of our approach used in this work today.

$$x^2+y^2=z^2 \quad (1)$$

Figure 1: An example figure showing our results.
